

# The Power of Digital Safety Systems

There are many ways to create a safe workplace, but using a digital safety system just might be the most effective. Alternatives including paper-based systems and Excel spreadsheets, are known to be time-consuming and prone to human error.

Take a look at some of the many advantages a digital safety system can offer your business, as opposed to the challenges you might face when using pen and paper:

	Paper-Based System	Digital Safety System
Current/New Business	With gaps in paperwork and no insight into safety because of poor management and organisation, bids may be lost due to a poor safety record.	Greater bidding opportunities due to higher safety performance and a stronger safety record.
Time to Completion	Staff gets bogged down by administrative tasks and takes hours to complete a task that could be accomplished in minutes with the help of a digital system.	With all documents digitised and centralised in one location, safety professionals will be able to find what they're looking for and complete tasks much faster.
Quality of Work	Relying on paper means that there is more room for human error, affecting the quality of work.	Provides complete transparency into your safety and reporting program, with less room for human error. Identifying trends will now be easier, allowing for quicker data-driven decisions.
Cost Containment	Since there is no insight into the safety program, leading indicators cannot be tracked, thus employees are more prone to injuries on-site, resulting in higher injury rates and insurance premiums.	With greater insight into your safety program, you can focus on leading indicators. This will help to reduce your injury and incident rate, decreasing the cost of insurance premiums.
Corporate Risk + Reputation	Because injury rates are so high, employees will not want to sign on, projects will be delayed, and your reputation will be affected within your industry.	A digital safety record will function as a repository for all records and information. With a strong safety program, you'll protect your employees and boost your standing in the market.
